## About Us

Monuments possesses a highly recognized innovative team combined with extensive expertise about 3D design, technologies customer needs and business development. We stand alone in this business and produce unmatched products with the incomparable quality production from conceptualization to delivery. Monuments' considerable experience with 3D printing puts it in touch with the latest and the best in technology. We endeavor the experience and expertise to provide holistic, end-to-end 3D printing solutions for maximum business impact. The real strength of Monuments is harnessed by tapping into the entire 3D printing ecosystem, comprising of 4 crucial elements: hardware, software, material and human skill sets.

## **Monuments extensive experience provides us the capability and knowledge required to:**

- Assess whether additive manufacturing is the best process for a part or project
- Creating a 3D printing strategy to meet your operational requirements
- Identify and qualify new materials for your parts
- Identify and recommend the processes and systems to adopt
- Produce the required designs at the highest quality
- Provide training and certification for your workforce

## **Monuments team provides:**

- Reverse engineering capabilities
- Conceptual development and design of a product specifically for 3D printing production
- Analyze existing parts and structures on the feasibility of using additive technologies in their production
- Modify an existing part to satisfy the conditions of additive manufacturing production
- Prepare 3D-models for production

Our team will validate product and part designs, qualify the optimal materials to be used and select the best manufacturing process to meet client's needs. All serial and batch parts manufactured using 3D printing go through rigorous design checks, technical verification and post-production quality checks and testing. All parts produced have to pass our internal quality control criteria which entails qualification of material, the production process and the machine itself.

# Covered Markets

The domain expertise of Monuments team help us to provide high quality additive manufacturing solutions to several markets.

Industrial & Energy

Healthcare

Educational & Illustrations

Architectural
